

Sketch C – River Side Walk

Public access to the Waikato River is a key feature of the Community Park. The River Side Walk will draw people in to the park as it will traverse stunning well hidden river views. The walk will be a combination of exposed aggregate footpath, (with the pebbles gradually getting smaller as they get further away, reflecting the pattern of erupted volcanic material), & boardwalks which add an experiential element to the design. It will be wide enough to cater for both pedestrian, and cyclists. It is to include inbuilt seating and modern practical site furniture. The walk will be well lit as will the BBQ / Picnic areas and playgrounds that occur along the walk. It will have stepped areas down to the river in safe locations and restrict access in steeper bank areas.
