Taupo WWTP		
1 0040 0 1 1 004		
uly 2016 - September 201	perational changes to Rakaunui Road LDS not reflected in Operations and Management Plns (wre. Removal of buffer zone and retirement of 2 blocks). A new version of the Operationa and Management Plan is being prepared	
	raft Plan completed and under review by Operations and Asset Manager	
1.1.0040	o inlet flow data for July - December 2016 followed by flow meter accuracy issues until June 2017. WWTP transfer pump volumes used to estimate incoming influent volumes.	
July 2016	coli concentration exceeded 3,000,000 MPN/100mL consent limit over July 2016, reaching a peak 30 day median of 3,454,500 MPN/100mL	
28 September 2016	dour complaint received by phone from 23 Stevenson Way. No known issue for odour.	
October 2016	verage nitrogen discharge over LDS for October 2016 was 66.2 kg/ha or 794 kg/year, over consent limit.	
November 2016	verage nitrogen discharge over LDS for December 2016 was 55.1 kg/ha or 661 kg/year, over consent limit.	
December 2016	verage nitrogen discharge over LDS for December 2016 was 63.5 kg/ha or 762 kg/year, over consent limit.	
9 January 2017	dour complaint from 9 January 2017 - investigated but possibly from network	
March 2017	verage nitrogen discharge over LDS for December 2016 was 59.3 kg/ha or 712 kg/year, over consent limit.	
June 2017	verage nitrogen discharge over LDS for December 2016 was 55.1 kg/ha or 661 kg/year, over consent limit.	
View Road LDS		
11044 =50		
January 2017 - June 2017	s of January 2017, no volume data available. Previously used templates for totalising volumes do not work. Therefore, daily total discharge to individual pivots, application rates and mass nitrogen discharge can not be determined and assesse	d for
	ompliance	
	ompletion of upgrades to Taupō and Rakaunui has allowed comparison of operator, historian and template data which reveals significant error in template data, reported historically for compliance. Accurate data reporting now waiting on completion of cor	ıtrol
	vstem changes	
	te not operated in accordance with Management Plan over this period. Insufficient records available to report to WRC to demonstrate compliance.

Taupo District Council
2018 Page 3

Motuoapa	
1 July 2016 4 August 2016	No influent flow data until 4/08/16
	Compliance with condition 7 not be achieved until daily influent and effluent volumes can be reported - effluent flow data available from 1 November 2016
	Total N 90 percentile (over 10 weeks) exceeded consent limit of 10 g/m3, peaking at 53.5 g/m3
	Weekly TN exceeded consent limit of 31.5 kg/week, peaking at 98.8 kg/week
January 2017 - June 2017	Annual TN discharge > 670 kg/year, 754 kg/year at years end
Гurangi	
July 2016 - June 2017	Monitoring programme change to replace wetlands ecological assessment with more detailed sediment and surface water monitoring. Changed programme not yet approved by WRC who will issue technical NC
1 - 5 September 2016	E.coli exceeds 90 percentile consent limit of 400 MPN/100mL between 1 and 5 September 2016, at 516 MPN/100mL.
October 2016 - April 2017	Elevated nitrogen in treated effluent pushed 90 percentile over consent limit of 15 g/m3, peaking at 25.2 g/m3 and 17.5 at end of year
October 2010 - April 2017	Elevated filtrogen in treated enident pushed 90 percentile over consent limit of 15 g/ms, peaking at 25.2 g/ms and 17.5 at end of year
Omori	
July 2016	Lack of automated daily effluent discharge volumes prevents full compliance with consent. Daily discharge volumes estimated using manually collected flows recorded on site by operator.
August 2016	Effluent flow data available from 5 August 2016. Influent flow meter not readign accurately.
July 2016 - February 2017	Between 1 July and 28 February, 25 incidents of flow measurement exceeded consent discharge limit of 800 m ³ /day
April 2017	1 April 2017 - effluent discharge 976 m3/day, over consent limit of 800 m3/day
•	
Whareroa	
August 2016	To prevent pond overflow, irrigation undertaken over 7 days from 29 July and 7 days from 26 August, prior to regenerated Lucerne crop reaching 10 cm, resulting in non-compliance with condition 10
December 2016	Irrigation undertaken over 8 days, over the 3 days intended by consent.
January 2017	No irrigation between 20 December 2016 and 1 February 2017. Therefore non-compliant with condition to irrigate at 12 day intervals
July 2016 - November 2016	Influent flow data unavailable - control system upgrade complete but flow meter not working. Daily influent and irrigation volumes available from December 2016
July 2016 - June 2017	Soil moisture readings not taken prior and post irrigation events - affects compliance with conditions 10, 13, 14 and 22
July 2016 - June 2017	No weather station to record daily rainfall data
July 2016 - June 2017	Sub-surface cut off drain not installed
July 2016 - June 2017	Soil and crop management plan review overdue
Whakamaru	
October 2016	Annual report due 30 October. Report not submitted as new consent granted 1 month prior to end of year. Considered best use of resource to report a full years monitoring, i.e. 1 July 16 to 30 June 17
ebruary 2017	As of February 2017, TDC has determined there may be issues with integrity of flow data. Investigation is pending.
January 2017	6 monthly compliance update report deadline of 30 January 2017 missed due to high volume of reporting at this time and limited resource over holiday period. Update provided May 2017.
•	Lake shore enhancement plan due for submission to WRC 24 November 2016. Mercury Energy holding up confirmation of plan
